

2013 Roadway Reconstruction Projects

The City of Lockport Maple, Milne, & Summit Reconstruction Project is currently under construction and scheduled to be completed by Mid-September. This project began this summer in order to bring a storm sewer outflow to Read Street. Read street will be reconstructed in 2015 as part of a federally funded Surface Transportation Project (STP), administered through the Will County Governmental League.

Third Street, from Madison to Muehl, will be under construction beginning early September through Mid-November. This project will include new curb & gutter, storm sewer, paving, sidewalk repair and connections, and landscape restoration.

Hamilton Street, from 10th to 12th and 11th Street, from Hamilton to State (IL-171) will also be under construction beginning in September, and continuing through November. This project will include water main replacement, new curb & gutter, storm sewer, paving, sidewalk repair, paver accents and planters (similar to those on 10th) and landscape restoration.

Two intersections will be under construction this fall, with upgrades including turn lanes and traffic signals. The intersection of 13th & State (IL-171) will begin in September and continue through early summer 2014. This project is a federally funded STP project, which is also being partially funded by the State of Illinois. The intersection of Thornton Street and 9th (IL-7), will also be signalized this fall. This project is being funded by the City of Lockport, with the help of developer contributions from adjacent developments.

The 2013 Resurfacing Project is also starting in September. Streets will be resurfaced in the Whispering Pines Subdivision. All Streets and cul-de-sacs will be resurfaced, with the exception of Douglas Parkway which was completed last year. Also being resurfaced are the Long Bow Creek subdivision, the southern half of the Arrowhead Subdivision, Muehl Street in the Drake Subdivision, Amy Court and Tonelli Trail in the Regency Point subdivision. A portion of Jefferson Street, between 5th & Thornton, will be partially reconstructed with new curb & gutter, storm sewer repairs, and paving.

Several areas of town were crack sealed this summer, which helps to preserve pavement that is still in good condition. The sidewalk program will also be completed by mid-September. If you have sidewalk repair requests, they may be submitted any time through the City's Service Request System (E-GOV), available on the City's website. However, the program is currently closed until next summer.

There are a couple of projects in the works already for next year's construction season. 2014 will bring the Garfield Street Reconstruction Project. Garfield Street will be reconstructed, from 9th (IL-7) to Division Street. This project will include new curb & gutter, storm Sewer, paving, sidewalk repair and connections, and landscape restoration. This project is also part of a federally funded Surface Transportation Project (STP), administered through the Will County Governmental League.

2014 will also bring the reconstruction of 10th Street, from Hamilton to Garfield. This project will include water main replacement, new curb & gutter, storm sewer, paving, sidewalk repair and connections, and landscape restoration. An open house will be held sometime this winter, to give affected residents an opportunity to view preliminary plans and voice any comments and/or concerns.
